

LDP* tap-off

©Verlane Desgrange 2005

***LDP is low density polyethylene, 1/16" thick. Engrave design with Dremel engraver to "raise" the pattern lines. Use as you would any tap-off. Transfer with a flat faced hammer on damp leather which should be on a heavy marble slab to give a solid transfer. The transferred pattern will have indented lines on the leather. Unlike leather, the LDP is almost transparent, making accurate placement possible.**
